

Radio Frequency Identification Networks Planning Using a New Hybrid Evolutionary Algorithm

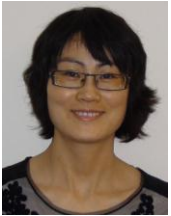

Han Feng, Jie Qi

College of Information Science and Technology, Donghua University, Shanghai, China

fh-1@163.com, jieqi@dhu.edu.cn

Han Feng received the B.E. degree in automation from Shandong Polytechnic University, Jinan, China, in 2006. Nowadays, He is a graduate student in Donghua University majored in pattern recognition and intelligent systems. His research is in intelligent optimization methods and its application.

Jie Qi is now an associate professor of Donghua University, China. She got her PhD degree of Systems Engineering at Northeastern University China in 2005. She visited The Hong Kong Polytechnic University for program research from 2007.3 to 2008.3. She will visit University of California, San Diego on 2013. 3

The current research interests are intelligent optimization methods, RFID system and its application in supply chain, and control systems and dynamics.
