Abstract—The next-generation protocol SPDY proposed by Google was decided to use as a basis of the technical specification of the HTTP/2.0 protocol which has been studying in the IETF standardization process. SPDY is a protocol to realize high-speed Web access by using SPDY session that has been established between the client and the Web server for transmitting and receiving page resources. Since a modern Web page usually consists of multiple page resources that are stored on multiple domains (multi-domain configuration), the client has to establish multiple SPDY sessions with multiple Web servers. In that case, SPDY would not realize high-speed Web access since it takes several seconds for establishing multiple SPDY sessions in mobile environment with high-latency. In this paper, we propose the SPDY accelerator which can considerably accelerates Web access speed by combining SPDY protocol and cache system even in the multi-domain configuration. We confirmed that the proposed system can improve the page loading time to 1/3 by comparing with the existing SPDY.

Keyword—SPDY, Web contents delivery, cache, reverse proxy

Gen Mineki received B.E. and M.E. degrees in Electronics and Information Engineering from Keio University, Japan in 2009, and 2011, respectively and in 2011, he joined KDDI R&D Laboratories Inc. His research interests include high speed web access systems. He is currently an associate research engineer in the IP Communication Quality Laboratory of KDDI R&D Laboratories Inc. He received the Young Researcher Award from the MoMuC committee of IEICE in 2012.

Satoshi Uemura received B.E., M.E. and Ph.D. degrees in Electronics and Information Engineering from Hokkaido University, Japan in 2000, 2002 and 2005, respectively and in 2005, he joined KDDI R&D Laboratories Inc. His research interests include QoE assessment in mobile services and traffic control systems in communication broadcasting integrated services. He is currently a research engineer in the IP Communication Quality Laboratory of KDDI R&D Laboratories Inc. He is currently a research engineer in the IP Communication Quality Laboratory of KDDI R&D Laboratories Inc. He received the English Session Award from the TM committee of IEICE in 2007, the Young Researcher Award from the MoMuC committee of IEICE in 2008 and the Young Researcher’s Award from IEICE in 2009.

Teruyuki Hasegawa received the B.E. and M.E. degrees of electrical engineering from Kyoto University in 1991 and 1993 respectively, and Ph.D degree of information science and technology from the University of Tokyo in 2008. Since joining KDD (now KDDI) in 1993, he has been working in the field of high speed communication protocol, multicast system, and future Internet. He is currently the senior manager of IP Communication Quality Laboratory. in KDDI R&D Laboratories, Inc. He received The Meritorious Award on Radio of ARIB in 2003. He is a member of IEICE and IPSJ.
