Abstract—In recent years, cooperative communications are widely studied. Cooperative communications can obtain the space diversity as multiple-input multiple-output (MIMO) systems. Moreover, the multi-relay cooperative communications can improve the system performance by using several relay nodes. In MIMO systems, the optimum packet splitting method has been proposed to obtain more strongly diversity. However, the optimum splitting method is not proposed in the multi-relay cooperative communications. Therefore, in this paper, we propose the optimum packet splitting method in the multi-relay cooperative communications.

Keyword—SC-FDMA, cooperative communications, multi-relay, packet splitting

Yuta Ida received the B.E. and M.E. degrees from Hiroshima City University, Japan in 2008 and 2010, respectively. Now, he is a Ph.D. student in Hiroshima City University. From 2011, he is also a special research student in Chiba University, Japan. His research interests are OFDM, MIMO, and cooperative communications for wireless communications.

Chang-Jun Ahn received the Ph.D. degree in the Department of Information and Computer Science in 2003 from Keio University, Japan. From 2001 to 2003, he was a research associate in the Department of Information and Computer Science, Keio University. From 2003 to 2006, he was with the Communication Research Laboratory, Independent Administrative Institution (now the National Institute of Information and Communications Technology). In 2006, he was on assignment at ATR Wave Engineering Laboratories. From 2007 to 2010, he was at the Faculty of Information Sciences, Hiroshima City University. Currently, he is working at the Faculty of Engineering, Chiba University, as an associate professor. His current research interests include OFDM, digital communication, channel coding, and signal processing for telecommunications. He once served as an associate editor for Special Section on Multi-dimensional Mobile Information Network for the IEICE Trans. on Fundamentals. From 2005 to 2006, he was an expert committee member for emergency communication committee, Shikoku Bureau of Telecommunications, Ministry of Internal Affairs and Communications (MIC), Japan. Dr. Ahn received the ICF research grant award for Young Engineer in 2002 and the Funai Information Sciences Award for Young Scientist in 2003. He is a senior member of IEICE and IEEE.

Takeshi Kamio received the B.E., M.E. and Ph.D. degrees from Shizuoka University, Japan, in 1994, 1996 and 1999, respectively. From 1996 to 1999, he was a Research Fellow of the Japan Society for the Promotion of Science. In 1999, he joined the Faculty of Information Sciences, Hiroshima University. Currently, he is a lecturer in the Department of Systems Engineering. His research interests are signal processing and nonlinear systems based on neural networks.

Hisato Fujisaka received B.E., M.E., and Dr. Eng. degrees from Keio University, Japan in 1981, 1983, and 1994, respectively. He worked in the Department of Optical Communications, Osaki Electric Co. until 1997. He is currently an associate professor in the Faculty of Information Sciences, Hiroshima University. His research interests include analysis and synthesis of nonlinear signal processing and communication circuits.

Kazuhisa Haeiwa graduated from the Department of Electrical Engineering, Tokushima University. He was engaged in the design and development of broadcasting transmitters. Since 2004, he has been a professor on the Faculty of Information Science, Hiroshima City University. He holds a D.Eng. Degree. In 1997, he received an Invention and Research Achievement Award from the Tokyo Metropolitan Award from the Tokyo Metropolitan Government. He also received a Development Award from the Image and Information Media Society in 1998 and an Advancement Award in 2001, IEICE member (fellow).
