ACKNOWLEDGMENT

This work was supported by Software Convergence Cluster, Incheon SW Convergence R&D Support program of Incheon Business Information Techno park[Grant ID: R17-128-02].

Younlae Lee is the director of KGI Corp., the South Korea Software Development Co. He received B.S. degrees in physics from Inha University and M.S. degrees in civil engineering from Kangwon University. He developed BlastAZ, the blasting simulation program. And his Research interests include 3D modeling and Imaging processing, Simulation systems, IoT(Internet of Things) and location-based infrastructure maintenance systems.

Young-Geol Lee is a full professor of computer software at Daelim University, South Korea. He received B.S., M.S., and Ph.D. degrees in computer science from Inha University in 1993, 1995, and 1999, respectively. His research interests include Database, Spatial Database, Geographic Information System, Spatial Warehousing, Data-centric Constraint Language and Process-aware facility management systems.

Hyunah Kim is an adjunctive professor and a faculty member of the collaboration technology research laboratory in the department of computer science at Kyonggi University, South Korea. She received her B.S. degree in computer science from Korea Nazarene University in 2001. Also, she received her M.S. and Ph.D. degrees in computer science from Kyonggi University in 2003 and 2009, respectively. Her research interests include workflow systems, SCORM-based e-Learning process models, BPM, BPI, ACM, workflow-supported social networks discovery and analysis, and process-aware Internet of Things.

Minjae Park is an assistant professor of computer software at Daelim University, South Korea. He received B.S., M.S., and Ph.D. degrees in computer science from Kyonggi University in 2004, 2006, and 2009, respectively. His research interests include groupware, workflow systems, BPM, CSCW, collaboration theory, process warehousing and mining, workflow-supported social networks discovery and analysis, process-aware information systems, data intensive workflows, and process-driven Internet of Things and process-aware factory automation systems.
