**Abstract**—This paper proposes a new mobility management mechanism delivering packets without any encapsulation as well as supporting session continuity. In the proposed scheme, each communicating node performs address translation which changes the destination address of IP packets for packet delivery with non-encapsulation. The proposed scheme can decrease the delay and increase the speed of packet transmission.

**Keyword**—Mobility Management, Packet Delivery, Non-Encapsulation, Address Translation

**Myoung Ju Yu** was born in Gyeonggi, Korea in 1982. She received B.S. and M.S. degree in School of Electrical & Computer Engineering, Chungbuk National University, Korea in 2005 and 2007, respectively. She is currently a PhD. candidate in School of Electrical & Computer Engineering, Chungbuk National University. Her research interests include mobile communication, user mobility and energy measurement in network.

**Seong Gon Choi** was born in Daegu, Korea in 1967. He received B.S. degree in Electronics Engineering from Kyeongbuk National University in 1990, and M.S. and PhD. degrees from Information Communications University, Korea in 1999 and 2004, respectively. He is currently a professor in School of Electrical & Computer Engineering, Chungbuk National University. His research interests include mobile communication, mobility, energy saving & measurement in network.
