***Abstract*— The authors have developing mobile device evaluation and testing platform to evaluate the mobile malware. Using the platform, the authors have created several courses in mobile device security. One of the important requirements is to provide students with a safe and sandboxed environment for malware analysis. Other features include tool enhanced lab environment, updated malware repository, log collection and exact assistance. Java based client-server application have been created to serve these requirements. Also a framework to perform mobile malware analysis and mobile penetration testing is proposed and implemented under this research work. Paper focuses on analysing requirements for such coursework to perform mobile malware analysis and mobile application penetration testing. Paper also gives details about the tools created and framework implemented to successfully teach Advanced Mobile Device Security course and perform interactive lab exercises...**

***Keyword*— Mobile Malware Analysis Framework, Mobile Device Security, Mobile Penetration Testing, Mobile Application Vulnerabilities, Mobile Application Security Testing Framework, and Mobile Malware Repository.**

Suyash S. Jadhav born in Pune, INDIA on 31st March 1992. Holding Bachelor of Engineering in computer engineering form Pune University, India (2013); currently pursuing Master of Science in computing security at Rochester Institute of Technology.
He is currently working with Dell SecureWorks as a Security Analyst at Atlanta,USA.

Tae H. Oh received a B.S. degree in Electrical Engineering from Texas Tech University in 1990 and M.S. and Ph.D. degrees in Electrical Engineering from Southern Methodist University (SMU) in 1995 and 2001, respectively. He is Associate Professor of Information Sciences and Technology Department at Rochester Institute of Technology (RIT). His research focus has been in mobile computing, mobile device security, mobile ad hoc networks, and cyber security. He has over 20 years of experience in networking and telecommunication as an engineer and researcher for several telecom and defense companies before he joined RIT.

Jeongnyeo Kim received her MS degree and Ph.D. in Computer Engineering from Chungnam National University, Korea, in 2000 and 2004, respectively. She studied at computer science from the University of California, Irvine, USA in 2005. Since 1988, she has been a principal member of engineering staff at the Electronics and Telecommunications Research Institute (ETRI), where she is currently working as a management director of the Cyber Security System Research Department. Her research interests include mobile security, secure operating system, network security and system security.

Youngho Kim received his MS and BS degree in Computer Science from Korea University, Korea, in 1999 and 2001 respectively. He was a visiting research scholar at Rochester Institute of Technology (RIT) in 2013 and 2014. Since 2002, He has been a senior member of engineering staff at the Electronics and Telecommunications Research Institute (ETRI). His research interests include operating system, embedded system and mobile device security.
