Abstract—**Micro-blogging is widely used nowadays. Most of the users normally write down their daily experience, feeling or emotion on their wall. This includes uploading photos of food they have taken. Some friends of this user might be interested in trying this food of which the photo has been uploaded by this user. However, it could be difficult for the friends to search that particular food on the Web as well as the exact location of the restaurant. In this paper, we provide a system that allows the users to search a particular food and produce the nearby restaurants on the Google Map. The proposed system will make the users to get the exact location of the restaurant easily.**

Keyword—**Food store searching, Google map, Micro-blogging, Cloud computing, Web Application**

Zhong-Liang Xiang is a candidate Ph.D. student in computer science at Dongseo University in South Korea. He received a science master degree in computer science at Ocean University of China in 2010 and a Bachelor of Science (BS) degree in computer science at Mudanjiang Normal University in 2003. His research interests include data mining and machine learning.

Xiang-Ru Yu received a science master degree in computer science at Ocean University of China in 2010 and a Bachelor of Science (BS) degree in computer science at Mudanjiang Normal University in 2003. Currently, she is a Lecturer at Weifang University of Science and Technology. Her research interests include data mining and machine learning.

Dae-Ki Kang is a professor at Dongseo University in South Korea. He was a senior member of engineering staff at the attached Institute of Electronics and Telecommunications Research Institute in South Korea. He earned a Ph.D. in computer science from Iowa State University in 2006. His research interests include intrusion detection, security informatics, ontology learning, and relational learning. Prior to joining Iowa State, he worked at a Bay-area startup company and at the Electronics and Telecommunication Research Institute in South Korea. He received a science master degree in computer science at Sogang University in 1994 and a bachelor of engineering (BE) degree in computer science and engineering at Hanyang University in 1992.
