Abstract— Currently, to create an interactive media provided multimodal interface, an expert shoots scenes based on scenario, and then edits scenes using special program. In the market, the technology that user can easily create an interactive media by reusing video contents is required. In this paper, we propose the method for creating an interactive media by only user input scenario.

Keyword— Interactive Media, Video Contents, Ontology

Minho Han received his BS and MS degree in computer engineering from Chungnam National University, Daejeon, Rep. of Korea in 2001. He joined ETRI, Rep. of Korea in 2000, where he is currently senior researcher. His research interests includes natural language processing and information security.

Wonjoo Park received her MS degrees in information and communication engineering from Chungnam National University, Daejeon, Rep. of Korea in 2000. She joined ETRI, Rep. of Korea in 2000, where she is currently senior researcher. Her research interests includes data mining, topic model, and ontology

Jeong-Woo Son received his MS and Ph.D. degrees in computer engineering from Kyungpook National University, Daegu, Rep. of Korea in 2007 and 2012 respectively. Since 2013, he has been with ETRI, Daejeon, Rep. of Korea. He focuses on machine learning, NLP, and information retrieval.

Sun-Joong Kim received her BS degree in computational statistics and her MS degree in computer science from Chungnam National University, Daejeon, Rep. of Korea, in 1989 and 2000 respectively. In February 1989, she joined ETRI, Daejeon, Rep. of Korea, where she is currently principal researcher and director. Her research interests includes convergence service control, smart TV, content knowledge mining.
