Abstract—In vehicular ad-hoc networks (VANETs), the presence of obstacles such as buildings and trees cause shadowing and fading, which interfere with the propagation of radio waves. Despite this, most of the existing opportunistic routing protocols do not consider shadowing in their simulations, which may lead to an overestimation of VANET performance. To solve this problem, our proposed routing protocol can minimize the effect of shadowing by actively selecting street intersection nodes as relay nodes. In this study, we propose a shadowing-fading-based intersection geographic opportunistic routing protocol (SIGO). SIGO determines the priority of a relay node by considering the distance between the relay node and the destination node, the link quality between these nodes, and a street intersection relay index (IRI) in which the best relay node is selected according to the influence of shadowing. Through simulations, we demonstrated the effectiveness of SIGO’s communication performance in terms of an improvement in the packet delivery ratio and the decrease in end-to-end delay.

Shuto Takahashi Received his B.E. degrees in Engineering from Ritsumeikan University, Shiga, Japan, in 2020. He entered same university in April 2020, where he is currently master’s student. His current research interests include vehicular ad-hoc networks.

Masami Yoshida He received his B.E. and M.E. degrees in Engineering from Ritsumeikan University, Shiga, Japan, in 2016 and 2018. He entered the same university in April 2018, where he is currently a Ph.D. student. His current research interests include ad-hoc networks and network coding. He received the best paper award in the ASON workshop of CANDAR 2021. He is a member of the IEICE.

Alberto Gallegos Ramonet Received his M.E. and Ph.D. degrees in Engineering from Ritsumeikan University, Shiga, Japan, in 2014 and 2018 respectively. From April 2018 to September 2021, he was an Assistant Professor at the same University. He joined the Graduate School of Technology, Industrial and Social Sciences at Tokushima University in October 2021, where he is currently Assistant Professor. His current research interests include but are not limited to Wireless Sensor Networks, MAC layer designs and Internet of things applications.

Taku Noguchi He received the B.E., M.E., and Ph.D. degrees in communications engineering from Osaka University, Osaka, Japan, in 2000, 2002, and 2004, respectively. He joined the College of Information Science and Engineering at Ritsumeikan University in 2004, where he is currently a professor. His research interests include performance analysis and the design of computer networks and wireless networks. He received the best tutorial paper award from IEICE ComSoc in 2012. He is a member of the IEEE, IEICE, and IPSJ.
